Below we have the full explanations behind what is included in each package, and we can assure you of no gimmicks. We know you will love our work, and call us back for more.

---

#### Description of Services:

##### Deck and Window Cleaning:

After fishing or boating for recreation, the deck can become very dirty with salt, dirty footmarks, fish guts/blood, etc. We will thoroughly hose down the deck with Clean Boat and water until the deck is spotless. After our first summer we tested almost every boat soap on the market. We finally found the best, Clean Boat is a biodegradable soap that is imported from France and is works well all over the boat.

##### De-Salt:

Salt on your boat is **not** a good thing. Having salt on your fiberglass and aluminum pipes can cause corrosion which is an irreversible damage. We make sure to remove any salt residue, and apply a product to protect from future salt damage.

##### Chamois Dry:

We make sure to hand dry the aluminum pipes to ensure no corrosion occurs. We also hand dry any cushions on the boat. We offer this hand dry because without drying the pipes they get covered in water streaks.

#### Stain & Rust Removal:

If blood remain on the surface of your boat for two long, they become permanent because of the harmful oil in the blood. Also, rust stains aren't permanent but leave an awful expanding brown spot on your fiberglass. We use our own formula to remove these terrible messes.

#### Rain-X Window:

We Rain-X your windows so that all of the water that splashes on your windows beads up and rolls off causing no visibility issues. Windshield wipers with the salt water streak! We also can get you a Rain-X windshield wiper to assure you will have no vision issues.

#### Indoor Detailing:

If your boat has a cabin, we will go inside and tidy any messes up and make sure your interior is presentable for guests.

#### Head Odor Removal:

If your boat has a head, we will use a chemical called "ExterminOdor" to treat your holding tank. This will remove all odor coming from the holding tank.

#### Compound and Wax Top Sides:

We will apply rubbing compound to the boat and buffer it in to remove all scratched polish. Then we will apply new polish to make it look like new. This should be done once a season to make sure that your fiberglass doesn't corrode or have any discoloration.
